

RELEASE THE POWER IN YOUR MOTORCYCLE

WHAT IS THE BOOSTERPLUG ?

The BoosterPlug is a Brilliant and Affordable way to transform your Motorcycle from "OK" to "Absolutely Marvelous".

No need to spend a small fortune on complicated multi adjustable electronic devices + endless Dyno hours, to make your bike run like it should have from the factory.

The BoosterPlug is **installed in less than 10 minutes**. It plugs directly into your bikes wire harness using original connectors
– no cutting or splicing.

A true Plug and Play solution that will make your bike so much better:

- **Improved and softer throttle response**
- **Faster acceleration**
- **Remove the jerky low RPM running**
- **Stronger and more reliable Idle.**
- **Reduced puffing in your aftermarket exhaust on engine braking.**

The BoosterPlug features a unique technology to provide your bike with a controlled fuel enrichment in all ambient temperature situations.
- **no other Plug'n Play device will do this.**

With the BoosterPlug you will only get the richer mixture when you need it: In Low RPM's and while accelerating. When you're at a steady speed on the open roads, the BoosterPlug will sit idle to **keep your fuel consumption low.**

Quite brilliant, actually :-)

CUSTOMER FEEDBACK

"You really solved the problems I hated about the engine. Idle feels stronger. Now I can slowly release the clutch from standstill and have the bike rolling without touching the throttle. I could hardly do that before."

"Very easy 5 minute install."

"The throttle response and fuelling is greatly improved with little or no snatch."

"Idle, especially right after a cold start, is smooth as silk, no missing or hunting."

"Thanks for producing such a simple but well engineered and well built performance improvement."

"It does make the bike smoother on gear changes and low speed work along with giving it better acceleration."

"By far the biggest difference I noticed right away was the newly found silky smooth shifting. There is no hesitation and much less clunking when shifting gears and a much more enjoyable ride. Your product has completely transformed the bike into a smooth running machine."

"This thing has returned the essential throttle control that every dual sport motorbike needs. No longer does the bike jump out from underneath me or try and toss me over the bars like an untamed horse."

AVAILABILITY

The BoosterPlug was introduced for BMW motorcycles in 2009, and the interest in our device and the support from customers have been incredible since day one.

We receive a lot of positive feedback from happy customers as well as requests for new BoosterPlug types, so we are constantly working on extending the BoosterPlug range to cover more motorcycle brands and models.

It is impossible to update this paper brochure fast enough to keep up with the introduction of new BoosterPlug's, so you need to visit www.boosterplug.com to see the list of available models.

There's a lot of interesting information on the website, so you will not be disappointed :-)

- **Available models**
- **Technical information**
- **Installation instructions**
- **Reviews and customer feedback**
